EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the specification:

On page 1, line 1, --This application is a divisional application of US Serial No. 10/262768 filed 10/02/02, now U.S. Patent No. 6,777,163-- has been inserted.

The following is an examiner's statement of reasons for allowance:

Claims 33-49 are allowable because there is no teaching or suggestion in the prior art of an apparatus for applying particulate material on a photopolymerizable element useful as a flexographic printing plate comprising the combination of means for forming a layer of a molten photopolymerizable material onto a support; means for applying particulate material onto an exterior surface of the photopolymerizable layer opposite the support; and means for providing relative movement between the layer of photopolymerizable material and the means for applying particulate material, wherein the exterior surface of the photopolymerizable layer has area portions each of which experience the same or substantially the same particulate application conditions.

Claims 50-60 are allowable because there is no teaching or suggestion in the prior art of an apparatus for applying particulate material on a photopolymerizable element useful as a

flexographic printing plate comprising the combination of means for mounting the photopolymerizable element having a layer of photopolymerizable material on a support; means for applying the particulate material onto an exterior surface of the photopolymerizable layer opposite the support; and means for providing relative movement between the photopolymerizable layer and the means for applying the particulate material, wherein the exterior surface of the photopolymerizable layer has area portions each of which experience the same or substantially the same particulate application conditions.

Claim 61 is allowable because there is no teaching or suggestion in the prior art of an apparatus for applying particulate material on a photopolymerizable element useful as a flexographic printing plate comprising the combination of means for mounting the photopolymerizable element having a layer of photopolymerizable material on a cylindrical support; means for applying the particulate material onto an exterior surface of the photopolymerizable layer opposite the support, wherein the means for applying comprises an applicator assembly having a cylindrical applicator pad; and means for heating the exterior surface of the photopolymerizable layer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Art Unit: 1734

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents disclose the state of the art with respect to apparatus for manufacturing flexographic printing plates: Vrotacoe et al (US 6,769,363), Borski (US 6,742,453), and Hartman et al (US 6,576,075).
